Redefining Surgical Reaming

Discover the flagship innovation from Incipio Devices – the **ACE[®] Reamer**, manufactured with precision and advanced manufacturing technologies.

This next-generation reamer is engineered to deliver outstanding cutting performance, durability, and consistency, all while integrating effortlessly into your existing setup.

Whether you're aiming to **increase** instrument lifespan, enhance surgical accuracy, or ensure more consistent feel between reamers use after use, the **ACE[®] Reamer** offers a seamless upgrade.

Here's why switching has never been so effortless – or so rewarding.

Seamless Upgrade

Similar Cost - Multiplied Lifespan

ACE reamer has a much longer lifespan than legacy reamers in tests simulating surgical use under controlled conditions, with competitive pricing.

Seamless

Crossbar reamer handle compatible.
Running change or full-set replacement.

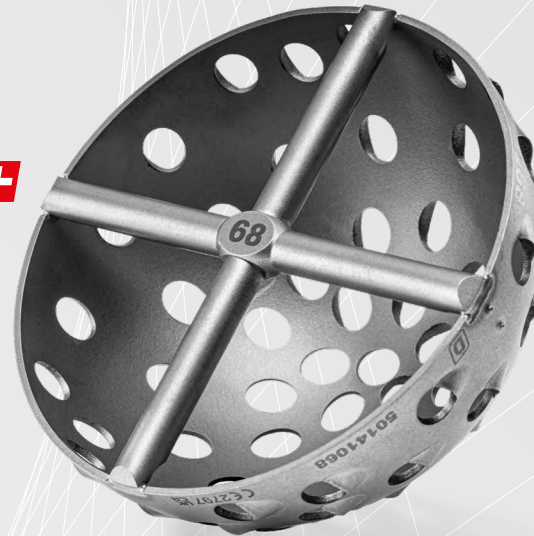

Proven Clinical Legacy

Proven tooth pattern and cutting efficiency offer a seamless transition for surgeons.

Accuracy

30% better cutting tolerances compared to current standard for greater consistency and precision of cut across sizes, eliminating size overlap and ensuring optimal performance in navigated and robotic surgeries.

Safety & Ergonomics

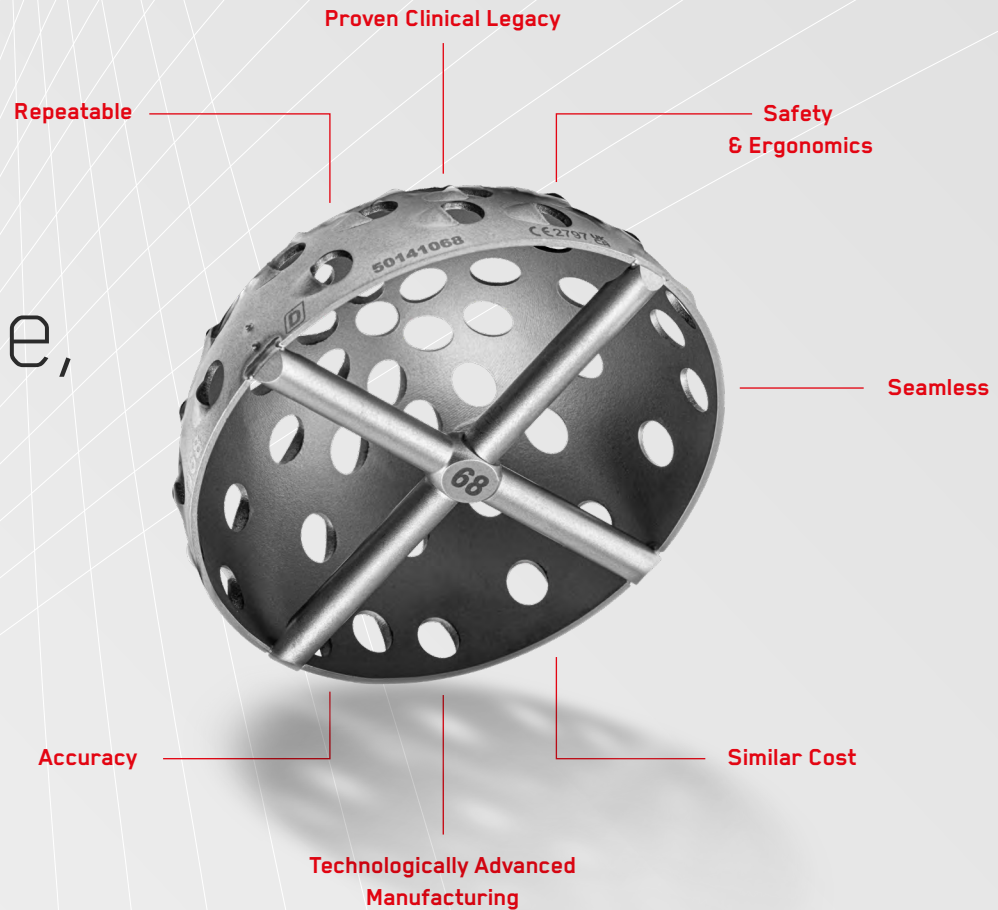

After 100 simulated surgeries, ACE reamers retain 60% of their cutting capacity, while legacy reamers drop to just 5%. The cutting retention ensures a smoother, more consistent feel from the 1st to the 100th use. Surgeons benefit from reduced fatigue and lower risk when using mixed kits of new and used reamers.

Technologically Advanced Manufacturing

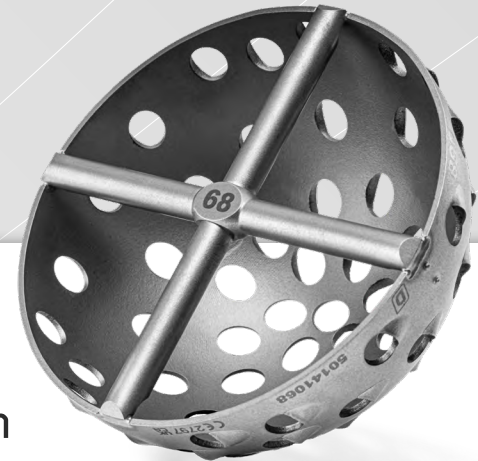

Fully automated Metal Injection Molding. Highly reliable and repeatable process. 420 series corrosion resistant stainless steel with hardness above 52 Rockwell.

Test Performance

Legacy reamers lose almost all cutting efficiency after 100 simulated surgeries, while ACE reamers still operate above 60% efficiency; ensuring precision, consistency, and longevity.
